

Wind Turbine Monitoring Sensors

Proven volume-supply models · all-fiber design, inherently lightning-safe

Blade loads, tower stress, flange bolts, attitude and anchor cables: 3~4 load sensors on the blade-root 3% section per JG/T 422-2013; the whole solution feeds one GM-FBG-16/32 and the monitoring platform, forming a complete turbine structural-safety system. The sensing end carries no electronics, needs no maintenance and is inherently lightning-safe; retrofits only instrument the key locations.

Whole-turbine solution

Blade loads + tower stress + flange gap + hybrid-tower anchor cables all feed one GM-FBG-16/32 interrogator and the monitoring platform; one interrogator at the tower base aggregates every point, and data goes up the farm ring network to central control.
